

Access Abortion Care

WeResistNow.org/flyer/abortion-access.html

Plan B pills can be purchased from most pharmacies without a prescription. It is an emergency contraceptive to prevent pregnancy after unprotected sex, not for routine use. Costs vary depending on the pharmacy. You can purchase Plan B ahead-of-time. It has a shelf-life of about 4 years. It should not be exposed to high heat or humidity in storage.

Mifepristone + Misoprostol can be used to end a pregnancy during the first 70 days (10 weeks). Your primary doctor and Planned Parenthood can prescribe these once you're pregnant. You can also access these through telehealth appointments in some states. To stock up in advance, see PlanCPills.org for options and more information.

Surgical abortion is available until viability in many states, though others have strict legal restrictions. Your primary doctor or Planned Parenthood (*including Telehealth*) can refer you. To see the laws in your state, visit CNN's Abortion Map

WeResistNow.org/AbortionMap.html

Beware so-called Pregnancy Centers. They often do not provide full health care options and are run by anti-abortion activists. This is not medical advice. See a Doctor.
